SUMMARY

Full-Stack & Gen AI Engineer with 1+ year building production LLM applications — AI agents, RAG pipelines, and workflow automation — across Python, Next.js, and Node. Focused on turning real business problems into **AI-assisted** products, from natural-language product discovery to multi-step agent workflows.

WORK EXPERIENCE

Software Engineer — [Wallmantra](#), New Delhi

May 2025 - Present

- Built and shipped "**Grace AI**" an AI-assisted shopping layer that lets customers find products in natural language and get personalized recommendations across the catalog.
- Added **LLM-powered customer support** workflows that handle common queries automatically and keep responses consistent, reducing manual support load.
- Improved storefront performance, cutting page load times by ~25% through caching and query optimization.
- Set up a **modular, reusable** service architecture with onboarding docs that helped new developers get productive faster.
- Worked with product, design, and growth teams to ship **AI features** that made products easier to discover and improved checkout.

Software Engineer Intern, [Amantya Technologies](#) (Onsite), Gurugram

March 2025 - May 2025

- Designed **multi-step agent workflows** that automated client request handling and reduced manual work for the operations team by ~40%.
- Built a structured logging and monitoring setup with automatic file rotation that significantly cut log storage and made issues easier to trace.
- Standardised log formats** and error-tracing across services, making debugging and deployments faster and more reliable for users

PROJECTS

LLMRouter — Cost-Aware Model Routing Gateway for LLM Applications

- Built a **routing gateway** that scores query complexity with local embeddings and dispatches each request to the cheapest capable model in a tiered pool, escalating only ambiguous queries to an LLM-based judge so classification stays off the hot path
- Benchmarked routing quality against a hand-labelled tier dataset, tracking cost per 1K queries, p50/p95 latency, and tier distribution — routing policy changes are **regression-tested** against the eval set rather than eyeballed
- Hardened for production with per-request budget ceilings, **automatic failover** on provider timeouts and **rate limits**, and structured logging of every routing decision for per-query cost and latency traceability

SemCache — Semantic Caching Layer for LLM Applications

- Built an **embedding-based caching layer** that matches semantically equivalent user queries (paraphrases, reworded prompts) to cached LLM responses, cutting redundant inference calls ~55% on the eval workload
- Ran **similarity-threshold** sweeps across ~1,200 query pairs to identify the operating point that keeps false-positive cache hits below 2%
- Designed a lightweight **FAISS retrieval pipeline** with local Ollama-hosted embeddings — no external API dependency, fast experimentation loop **Reduced average response** time by ~90% on cached queries by serving results directly from the vector store instead of calling the LLM.

EDUCATION

- Master of Computer Applications (MCA) | 92%**
Guru Gobind Singh Indraprastha University (GGSIU), New Delhi
- Bachelor of Computer Applications (BCA) | 90%**
Guru Gobind Singh Indraprastha University (GGSIU), New Delhi

September 2023 – May 2025

November 2020 - August 2023

ADDITIONAL INFORMATION

- Languages:** Python, **JavaScript (ES6+)**, C++, Java
- AI/LLM Development:** LangChain, RAG, Vector Databases (FAISS), Embeddings, Agent Workflows, LLM Evaluation, n8n
- Backend:** Node/Express, REST APIs, JWT Authentication, SQL
- Frontend:** React.js, **Next.js**, HTML5, CSS3
- Developer Tools & Platforms:** Git, Firebase, Postman, Figma
- Cloud & DevOps:** Docker, CI/CD (GitHub Actions), AWS, Git, Agile
- Certifications:** [Meta Front-End Developer Specialization](#), [Namaste React](#) & [Namaste Node](#) (Akshay Saini)
- Awards/Activities:** Achieved **4899 World rank** out of 7 lakh participants in Naukri Young Turk, Former President of CodeShaala Tech Society (**Led 5 events**, mentored 30+ juniors), Participated in 3+ Hackathons, Led backend in all.
- Competitive Profile:** Solved **1000+ DSA** problems, **2150+ rating** on Leetcode with **139 world ranking** in a contest.
